VALUING AFFORDABILITY

V O L U M E T W O : C H I C A G O

VALUING AFFORDABILITY VISION STATEMENT

Safe, decent affordable housing is the foundation for educational and employment success, community stability and regional competitiveness. Therefore, affordable housing must be a defining value in a systemic change of Chicago's policy and resource commitments. Recognition from leaders of community organizations, religious and business institutions for the need to change the way we value affordable housing places Chicago at a pivotal moment. By Valuing Affordability, Chicago's leadership will create strong neighborhoods with the resources and community support required for the development and preservation of affordable housing.

Data collection for this project was conducted by the Nathalie P. Voorhees Center at the University of Illinois at Chicago under the leadership of Ms. Patricia Wright. In addition, Professor Janet Smith of the University of Illinois at Chicago developed a cluster analysis of Chicago's housing stock that pointed the direction for further analysis presented in these pages. We thank them for their ongoing guidance in this project.

This Fact Book was funded with the generous support of The Chicago Community Trust and Fifth Third Bank.

The advice of Mr. King Harris and additional support of the Pittway Corporation Charitable Foundation and Metropolis 2020 brought this project to a new level.

Our financial partners in community development made printing and distribution of this document possible: Bank One, Chicago Federal Home Loan Bank, Citibank, Charter Bank, Federal Reserve Bank of Chicago, Harris Bank, LaSalle Banks, National Equity Fund (NEF), Northern Trust, National City, US Department of Housing and Urban Development, Washington Mutual.

Chicago Rehab Network (CRN) is a citywide coalition of neighborhood based nonprofit housing organizations working to create and preserve affordable housing in Chicago and the region. Through research, publications, policy and advocacy, training and technical assistance, CRN advocates for affordable housing resources at the local, state and national levels.

As this Fact Book goes to press, with new rounds of elections fast approaching, affordable housing is at a higher place in policy discussions than it has been in years. The stakeholders and legislators engaged with affordable housing issues has broadened exponentially. So has our understanding of public engagement of the issue. When the Chicago Rehab Network, as part of the coalition called Housing Illinois, hired a market research firm to survey attitudes about affordable housing in the Chicago metro region, more than eight in ten respondents said it is important to ensure we have more housing for low and moderate income people in the Chicago region. More surprisingly, two-thirds of them supported building more affordable housing in their own communities.

Breaching the gap between the public need for affordable housing and the will of public officials to address it is what the Chicago Rehab Network has been about for over 25 years. When we published the last edition of the *Affordable Housing Fact Book* in 1993, it was instrumental in convincing Chicago leaders to greatly expand and reshape the city's commitment to creating and preserving affordable housing. With this edition of the Fact Book, we expect the same results on city, regional, and statewide levels. We have expanded our scope to include the state of Illinois. Our aim is to create a tool for legislators, advocates, and other stakeholders to identify housing needs and to bring affordable housing to the public agenda.

We are printing the 2003 edition of the *Affordable Housing Fact Book* in three volumes. The first volume is an Overview of Chicago and Illinois based on maps of changing patterns in population and housing supply, housing costs and affordability indicators such as overcrowding and housing cost burden. The second volume focuses on Chicago with fact sheets for each ward and community area in the city. The third volume contains fact sheets for each of Illinois' 102 counties and 50 major municipalities.

This information will also be available on the Affordable Housing Fact Book page at our expanded website www.chicagorehab.org, where users will be able to download copies of the fact sheets from all three volumes. Users will also be able to search our full database to consider and compare the data that most interests them – including additional data we could not fit in these volumes, as it becomes available.

In executing this project we owe much thanks to our longstanding partnership with the Nathalie P. Voorhees Center at the University of Illinois at Chicago, which collected most of the data. The Voorhees Center continues to be an important source for the data and analysis essential to community development policy in Chicago. We are also grateful to King Harris, who, together with Metropolis 2020, supported the expansion of our county level data to provide a fuller picture of the state of Illinois. This document would have been a less thorough resource without their vision and support.

We hope to hear from you with questions and comments about the *2003 Affordable Housing Fact Book*, and we look forward to conducting workshops on how this data can be translated into policy, advocacy and action around the affordable housing issues that present themselves in your community. Housing is foundational to all community building endeavors, and if we are to value affordability, we must act to secure its support.

Kevin F. Jackson
Executive Director

EXECUTIVE SUMMARY

In both Chicago and Illinois, the 1990s were a decade of growth and prosperity for many households. Yet the 2003 edition of the Chicago Rehab Network's *Affordable Housing Fact Book* reveals how uneven development has brought new kinds of housing stress to many communities, and exacerbated some old ones.

City of Chicago

Mapping affordability indicators across the city of Chicago resulted in patterns so persistent we named them. For a clearer picture of these clusters see the maps in Volume One: Overview.

- **Population and Housing Units** both grew in Chicago between 1990 and 2000, yet growth was uneven. A cluster of communities in the Central Area and North Lakefront stand out as a **booming cluster**, with the most new construction activity, but often with smaller households occupying more housing. At the same time, whole swaths of south and west side continue to lose population and housing stock, creating a **thinning cluster**. Both immigration and displacement from other communities appear to have contributed to the creation of a **bursting cluster** through Chicago's northwest and southwest sides, where population and total housing units grew the most.
- **Occupancy Status:** Chicago is still a city of renters – 56 percent of housing units are renter occupied – but the 1990s saw a shift toward

home ownership. The number of owner occupants rose 9 percent between 1990 and 2000, and gained 2.3 percentage points as a portion of the city's households. Citywide, the rental vacancy rate fell to 6 percent, signaling a tight rental market. Yet twenty-eight communities had rental vacancy rates at or below 4 percent, even while several communities in the thinning south side had rates over 12 percent.

- **Incomes:** The median income rose 10 percent between 1990 and 2000, but the highest incomes differed sharply between the booming cluster along the north lakefront and the thinning cluster on the south and west sides. Poverty dropped citywide, and yet numbers of poor and low income households rose dramatically through the bursting northwest and southwest corridors – suggesting displacement from those booming communities where the low income population dropped, and from thinning ones where the total population continued to decline.
- **Housing Costs:** The city's median rent rose only modestly – by 3 percent after adjusting for inflation. Yet in thirty community areas, rents rose by 25 – 75 percent. Rents rose most not in the booming core itself, but in a ring spreading outwards around it. Citywide, the median income rose almost three times as much as the

median rent did, yet rents rose more than incomes in all but sixteen communities. In fact, rents rose 27 – 62 percent faster than incomes in more than a dozen communities.

- **Cost Burden:** The number of renters paying more than 35 percent of income for housing dropped 11 percent between 1990 and 2000. Yet this drop was offset by a 33 percent surge in the numbers of cost burdened owners. Overall there are nearly 240,000 households struggling under excessive housing costs citywide. Their numbers are growing in the bursting communities through the northwest and southwest corridors, and on the far south side.
- **Mortgage Foreclosures and Overcrowding** emerged as the affordability indicators of the 1990s. The National Training and Information Center found that mortgage foreclosures rose 74 percent between 1993 and 2001, and by more than 150 percent in 16 communities through the South Lakefront and Southwest Side. Citywide, 10 percent of all households are overcrowded, but as many as 35 percent of households are overcrowded in a ring around the central area, where rents and home values also rose the most. Overcrowding rose 25 percent citywide between 1990 and 2000, and jumped 100 percent or more in 16 communities – particularly in the bursting clusters on the far northwest and southwest sides.

Illinois

The pattern established in Chicago, where rising incomes were accompanied, and sometimes outpaced by rising housing costs, extended through much of Illinois.

- The state of Illinois saw growth that exceeded that in Chicago by many indicators, and yet when mapped across counties, much of the state's prosperity is concentrated in a **super-region** spreading out from the Chicago/Rockford metro areas into the central state. Incomes, rents and home values all tend to exceed state medians within this cluster, while county medians outside this cluster fall short of state averages.
- **Incomes:** Only twelve counties had median household incomes at or above the state median income of \$46,590 – and seven of them fell in the Chicago metro area. Median household incomes in rural counties to the southeast and southwest of the state were under \$33,000. Higher median incomes correspond with greater concentrations of high income households, particularly in the six counties immediately surrounding Cook, where high income households, with incomes over 120 percent of the state median, comprise 50 – 60 percent of all households in some of the state's most populous counties.

- **Housing Costs:** In many counties, high incomes correspond to higher rents and home values. Incomes are rising faster than housing costs statewide, but the housing costs of owner occupants are rising faster than incomes throughout the super-region. In ten of the counties in this region, homeowner costs are rising 10 – 21 percent faster than incomes.
- **Housing Cost Burden:** Renters are more likely to be paying 35 percent or more of their income for housing than homeowners in Illinois, particularly in rural counties, where rents may be low, but incomes are very low. Yet the number of homeowners paying large portions of their income for housing rose 38 percent from 1990 to 2000. Most cost burdened owners were low income households, but cost burden grew fastest among moderate income owners, whose numbers increased by 80 percent between 1990 and 2000.
- **Poverty:** The number of people in poverty dropped by 3 percent statewide, but it rose in fourteen counties – including nine of those surrounding Cook County. Some of these persons may have been displaced from the city of Chicago, where the number of people in poverty dropped 6 percent. The concentrations of people in poverty in these counties are still low, but the fact that their numbers increased in

those counties with unusually high incomes, and housing costs, indicates the growing need for affordable housing in this region

As a final chapter in the each volume, the *Affordable Housing Fact Book* outlines a menu of policy initiatives to create new resources and integrated policies for preventing displacement, promoting preservation and encouraging production of affordable housing. Most of these initiatives have been developed through Valuing Affordability, the Chicago Rehab Network's ongoing campaign to create the social and political climate where affordability is recognized as a benefit to all residents and institutions, and as an essential infrastructure for successful cities and regions.

HOW TO USE THESE FACT SHEETS

What do these facts mean?

Affordability is an umbrella term, drawing on a host of housing related variables that help us understand the needs of a community and the people who live there. These fact sheets are designed to bring some of the most important of these factors together in one place. As you use them to assess how they add up to impact the quality and affordability of a community's housing stock, you might want to consider some of the following questions:

Is the population rising or falling?

Population change can both indicate and drive changes in housing conditions. For instance, the population might fall as people are moving out of a disinvested community, and a dropping population can also make for a soft housing market, making it difficult to attract new investment. On the other hand a dropping population could also indicate that a neighborhood is being redeveloped for richer, smaller households.

Is it the same population?

Significant changes in who lives in a community can also indicate changes in housing conditions, as a community becomes a more, or less affordable place to live. Change in ethnic composition could be one indicator of such a change. Change in incomes could be another.

Have incomes changed?

A significant change in the median income does not necessarily indicate a rise in the incomes of long time residents – if the median income rose, it could mean that more high income people moved to the area, or that low income people left. This might show up as an increase in the number of high income households, or a drop in the number of low income households, or a combination of both.

The community area and ward fact sheets show income distribution based both on the Chicago median income and on the area median income. The area median income is calculated by HUD each year based on incomes in the six county Chicago Primary Statistical Area, and is used to determine affordability guidelines for many subsidized housing programs. Since it includes suburbs like Winnetka and Lake Forest, a family earning less than 80 percent of the area median income may have an income significantly higher than a low income family earning 80 percent of the Chicago median. As a result, much subsidized “affordable” housing in Chicago is targeted toward households earning considerably more than 80 percent of the Chicago median income.

Has the number of people in poverty changed?

Citywide, the number of people in poverty dropped by 6 percent between 1990 and 2000, but in many communities the number rose. Some of these changes may reflect a change in the income of long time residents, but it could also indicate that the population itself is changing as housing becomes more, or less affordable.

Did the housing supply keep pace?

Did the number of housing units rise or fall at a pace consistent with the change in population? And was there any shift in the balance between homeowners and renters? Rental housing meets the needs of many households who cannot afford to buy their own home. Fluctuations in the rental vacancy rate can also indicate whether the supply of rental housing is adequate. A rental vacancy rate of 6 percent or less is generally considered a tight rental market, while a rental vacancy rate of 12 percent or more indicates a soft one.

Did the median rent/median home value rise or fall?

Is the median rent/median home value higher or lower than it is for the city as a whole? Did it rise faster or slower than the community's median income? If housing costs are rising faster than incomes, it might indicate that housing is less affordable than it was in 1990. If incomes are rising faster than housing costs, it could indicate that housing is becoming more affordable, but it could also mean that higher income households are moving in, or lower income households are leaving – which would show up under percent change in income distribution.

How many renters/homeowners are housing cost burdened?

Households that are paying more than 30 percent of their income are often said to be housing cost burdened. On these fact sheets we tallied how many households were paying 35 percent or more of their incomes for housing, and how many were paying 50 percent or more. In general, renters are more likely than owners to be paying large portions of their income for housing. But in Chicago and in Illinois, we found housing cost burden to be a growing problem among homeowners.

How do the proportions of cost burdened households in your community compare to city or state figures? Cost burden can lead to other forms of housing stress, such as overcrowding, as families double up to pay the rent, or mortgage foreclosures as families find they can't make their housing payments.

How many households are overcrowded?

Households with more than one person per room were counted as overcrowded on these sheets. For example, a 4 person household in a one bedroom, three room apartment would be counted as overcrowded, but a three person household in the same apartment would not. Overcrowding is on the rise in Chicago and Illinois – how do the rates in your community compare to the city or state as a whole?

What can you do?

Educate yourself and share your knowledge with others. Support affordable housing in your neighborhood. Use this book. If you would like to become more active, call the Chicago Rehab Network and we can direct you to organizations that are working for affordable housing in your area.

Chicago and Illinois shared a decade of growth in the 1990s. Yet in many communities, rising incomes exerted a pull on housing costs, and rising housing costs bring a host of associated issues, from displacement of low income households, to overcrowding, to excessive housing cost burdens for renters and, increasingly, for homeowners. Large portions of Chicago and Illinois appear virtually untouched by the boom economy. These areas continued to lose population and housing stock through the 1990s, and yet are still unaffordable to many of the families who remain.

Affordable housing benefits all residents and institutions and is necessary for the success of any city, region or state. Yet growth alone does not ensure a stable and adequate affordable housing supply. Strong neighborhoods require supportive public policies to prevent displacement, promote preservation and encourage production of new affordable housing throughout whole cities and regions, in both rural and metropolitan areas of the state. If opportunity is to be available to the striving and not just the established, affordable housing, intentionally preserved and broadly distributed, must be a part of our plans.

In 2001, the Chicago Rehab Network (CRN) inaugurated Valuing Affordability, a multi-year campaign to create a social, political and economic climate that values affordable housing. The campaign identified public awareness, political

leadership and sound policy and resource proposals as the three keys to bringing affordable housing to the public agenda. In the months since that campaign was conceived, CRN has mobilized a combination of public awareness and political leadership to advance significant policy gains in four strategic areas – preserving neighborhoods, living rents, housing set-asides, and public education. These gains are summarized below. For additional information on specific policies or on how you can join our efforts to summon the leadership and public awareness to advance more sound policy, please visit our website at www.chicagorehab.org.

Preserving Neighborhoods: CRN advocates for long-term property tax reforms that prevent displacement of homeowners and renters, and other key activities that preserve the stock of expiring federally assisted housing. Successful proposals to preserve neighborhoods include innovative tax policy reforms to eliminate threats to the rental housing stock: reduction in Class 3, expansion of Class 9, and creation of Class S. The new Class S tax incentive alone has worked to preserve hundreds of Section 8 units at risk of market conversion since its introduction in 2002. Additionally, tax reforms have been passed in Cook County that benefit moderate income homeowners. The leadership of the Cook County Commissioner and the Assessor's office joined by community leaders demonstrates effective policies can be established for affordable housing.

CRN is currently working towards a property tax exemption for nonprofit owned multi-family rental housing. All nonprofit owned affordable housing would be exempt from property taxes so long as it continues to be affordable and the income from the property is used to benefit the property for operating expenses or rental subsidy.

Affordable housing is a valuable community asset that is usually created through substantial public investment of both time and money. In particular, there are tens of thousands of units subsidized through project-based Section 8, Low Income Housing Tax Credits (LIHTC) and other financing and subsidy programs. CRN maintains a tracking system of at-risk properties in Illinois that is available to community development stakeholders and decision makers. Information will be shared and partnerships created to minimize the number of affordable rental units lost due to an owner's decision to opt out of the program, and to encourage sale of buildings to developers with a preservation mission.

In addition, CRN advocates amendment of the Illinois Federally Subsidized Housing Preservation Act to give tenant associations or their representatives the right to purchase their housing when an owner opts-out of their extended use contracts. And we continue to advocate for a preservation policy that would improve the enhanced voucher for displaced tenants, and federal exit tax relief.

In the case of troubled projects, CRN also provides direct technical assistance. Most recently we have been working with the tenants of Evergreen Terrace in Joliet. The owner of this Section 8 property intended to renew the contract and maintain affordability but has been obstructed by the area's political leadership, which would like to see new market rate development at that site.

Living Rents: CRN has long advocated for long term subsidy strategies that enable the creation of housing units for those who need it most. Our *Present Realities, Future Prospects* documented the underwriting weaknesses in the Low Income Housing Tax Credit portfolio and the inability of this program to serve people under 30 percent of the area median income. We closely monitor and periodically evaluate the use of existing city and state public resources to identify policy and resource barriers.

This year's resolution by the city of Chicago to endorse the National Housing Trust Fund Act is one potential solution that would bring significant dollars to serve lower income households in Chicago. Additionally, our *Affordable Chicago* report recommends new resources, such as a dedicated revenue stream based on the transfer tax, that could provide deeper rental subsidies for affordable housing development. Another recommendation, a housing set aside, would provide new affordable for sale housing for those earning over 60 percent of the median income,

thus freeing up public dollars to be targeted to those at the lower end of the income spectrum.

Housing Set Asides: Currently 91 municipalities across the country successfully employ housing set aside policies to ensure that affordable housing is not left out when the housing market booms. In late 2002, Alderman Toni Preckwinkle introduced an ordinance requiring that any housing development over 10 units in Chicago set aside 25 percent of those homes as affordable. Had such a policy been in place during the 1990s, it could have created 8,000 new affordable housing units, or roughly the same number of new units created by the Chicago Department of Housing in 10 years with \$2.5 billion in public subsidies.

A set-aside policy could tap the market to ensure a broad distribution of affordable housing in Chicago, and the proper cost offsets can ensure that developers are not overburdened. As public policy, inclusionary zoning is congruent with the current mixed income housing policy. Both require additional public investments and private sector involvement for a greater public good.

Public Awareness: Public awareness is an important support for sound policy, and CRN is often approached to provide materials and analysis to guide the work of advocates and public leaders alike.

In 2001, CRN's public education efforts took a new direction when we founded Housing Illinois, a coalition of 3 dozen developers, advocates,

government, faith and civic organizations with the express purpose of raising public awareness of the need for affordable housing. After building the coalition, we initiated a market research firm to study public perceptions of affordable housing in the six county metropolitan region. The results surprised us. Six in ten residents in the region think there is too little housing affordable for people of moderate or low incomes in their communities and, and two in three say they support building affordable housing in the area where they live.

Housing Illinois aims to build on these results to create a communications campaign. The campaign will develop a range of creative communications materials – such as ads, fact sheets, posters, brochures, stories – to target a very general audience as well as some specific segments. Housing Illinois will offer training to build the capacity of organizations to use communication tools to bolster support and overcome opposition to affordable housing.

The *Affordable Housing Fact Book* is itself an important tool for public awareness. Its purpose is to arm advocates, legislators and leaders from all areas with the facts they need to understand the housing needs of their communities. We are confident sound facts will inform the sound policies that will vouchsafe the affordability of our cities, regions, and the state of Illinois in the future.

Except where otherwise noted, data has been gathered from the US Census and other sources by the Nathalie Voorhees Center at University of Illinois at Chicago.

Vacant housing units include both vacant for rent and vacant for sale units. Rental Vacancy rate is the number of units vacant for rent as a portion of total rental units (both renter occupied and vacant for rent).

New construction permits and demolition permits were collected by the Voorhees Center from the Chicago Department of Buildings. Permits may affect more than one housing unit, and some construction or demolition activity may occur without permits. Thus changes in construction and demolition permits do not add up to match the change in total housing units as reported by the US Census.

Median income figures reflect incomes reported for the year previous to each decennial census (1989 for 1990, and 1999 for 2000)

Income Distribution Analysis:

For Chicago community areas and wards, income distribution is calculated relative to both the city of Chicago Median Income (\$38,625 for 2000, and \$26,301 for 1990) and the Area Median Income. The Area Median Income is calculated by the US Department of Housing and Urban Development each year by household size, and represents the six county metropolitan region. Fact sheets refer to area median income for a family of four (\$67,900 for 2000, and \$43,400 for 1990).

For municipalities and counties, income distribution is calculated relative to the state median income (\$46,590 for 2000, \$32,252 for 1990).

Low-income households are counted as those earning less than 80% of median income.

Moderate-income households are counted as those earning between 80 – 100% of median income.

High-income households are counted as those earning more than 120% of median income.

Poverty rate is calculated as the number of persons in poverty as a portion of the number of persons for whom poverty status has been determined by the US Census (not as a portion of the total population).

Cost burdened renters are calculated as the number of households paying more than 35% of their income for housing. Extreme cost burdened renters are calculated as the number of households paying more than 50% of their income for housing.

The percent of cost burdened renters is calculated as the number of households paying more than 35% of their income for housing, divided by the number of specified renter households for whom the US Census has calculated housing costs as a portion of income (not by the total number of renter occupied units).

Similarly, cost burdened owners are calculated as the number of households paying more than 35% of their income for housing costs – including mortgage, property tax, and insurance. The percent of cost burdened owners is the number of cost burdened

owners, divided by the number of specified owner households, for whom the US Census has calculated housing costs as a portion of income (not the total number of owner occupied units).

Overcrowded households are counted as those with more than one person per room (not per bedroom). Percent overcrowded households is calculated as the number of overcrowded households, divided by the number of households for which the US Census has reported persons per room.

Mortgage foreclosure data is taken from the National Training and Information Center's November 2002 Analysis presented at Chicago's Foreclosure Crisis Meeting on December 4, 2002.

Public Housing data is taken from *Not Even a Place in Line: Public Housing & Housing Choice Voucher Capacity and Waiting Lists in Illinois*, compiled by the Mid-America Institute on Poverty of Heartland Alliance for Human Needs & Human Rights, in October 2003.

Housing court case data was gathered from the Voorhees Center from the city of Chicago Department of Buildings.

Lead exposure data was gathered by the Voorhees Center from the Chicago Department of Public Health.
